This map of California illustrates the distribution of population density by county. The color scale ranges from 1.0 (light yellow) to 1.4 (dark red). The Central Valley and coastal areas are predominantly colored in shades of orange and red, indicating higher population density. The mountainous regions, particularly in the north and east, are colored in shades of yellow and light orange, indicating lower population density. The map shows a clear pattern of higher density in the Central Valley and coastal areas, and lower density in the mountainous regions.
