

The graph displays the percentage of the population in the United States with a positive COVID-19 antibody titer. The red line represents the percentage, which starts at 100% in February 2020, drops sharply to around 10% by April, and then fluctuates between 10% and 30% through 2020 and early 2021. The teal line represents the 95% confidence interval, which is shown from June 2020 to June 2021, remaining relatively flat around 20%.

Current = 49 %

Actual and Projected Vaccines Doses

note: scattered doses in the summer are wrapping up second doses, later doses are children
